

SALEXA — WEB APPLICATION

Complete documentation (browser-based)

PART 0 — READ THIS FIRST

0.1 What the web application is

The **browser-based side** of Salexa. It is used by people sitting at a desk — managers, back-office staff, accountants, and admins. It is **not** used by field agents (they use the phone).

0.2 The four products it serves

The web app is **one codebase with switchable modules**. A customer only sees what they bought.

Product	Who buys it	Web sections they get
Agent Live Tracking	Any company with field staff	Live map, agents, attendance, tracking health
Sales & Field Force	Manufacturers, distributors, FMCG	Everything above + beat plans, visits, orders, invoices
Accounts (Finance)	Any business needing books/GST	Ledger, invoices, bills, GST, reports
Ops Console	Salexa's own team (internal)	Leads, customers, pricing, discounts

0.3 The golden rule of this app

Everything is dynamic and controlled from the admin side. Prices, modules, roles, statuses, forms, tax rates — an admin changes them in the browser and they take effect immediately, with no code change and no redeploy.

0.4 Universal behaviour (applies to every screen)

1. **Login is one screen** for all products; what you see afterwards depends on your role + the modules your company bought.
2. **Every list screen** has: search, filters, sort, pagination, and an **Export** button (Excel/PDF).

3. **Every detail screen** opens as a **side drawer** where possible (so you never lose your place in the list).
 4. **Every action** is one or two clicks. No deep menus.
 5. **Every change is logged** — who did what, when (audit trail).
 6. Works on a laptop screen and above; usable on a tablet. Phones use the mobile app instead.
-

PART 1 — SHARED SCREENS (all products)

1.1 Login

- Fields: company code (optional), email/phone, password.
- Links: forgot password, request demo.
- After login: land on that role's home screen.
- **Single session** — logging in elsewhere logs out the old device.

1.2 Top bar (always visible)

- Global search (finds customers, orders, invoices, agents).
- Date-range picker.
- Notifications bell.
- Profile menu → my account, change password, log out.

1.3 Left sidebar (navigation)

- Only shows sections the company **bought** and the role is **allowed** to see.
- Grouped by area, not a flat list.

1.4 User & role management (*admin only*)

- Add / edit / deactivate users.
- Assign role: Admin, Manager, Field Agent, Warehouse, Accounts, Viewer.
- Set what each role can see and do (per module, per action).

1.5 Company settings (*admin only*)

- Company profile, logo, address, GST number(s), financial year.

- Working hours, holidays, week-offs.
- Numbering series (invoice, order, delivery note).
- Enabled modules (what this company has purchased).

1.6 Audit log

- Every action: who, what, when, old value → new value.
 - Filter by user, module, date.
-

PART 2 — AGENT LIVE TRACKING (web)

2.1 Dashboard (home)

- Live counters: on duty now, punched in today, absent, on leave.
- Alerts strip: agents offline, fake-GPS detected, phones with permission problems.
- Small charts: attendance trend, hours worked, distance covered.

2.2 Live map

- Full-screen map, one dot per on-duty agent, colour-coded (moving / idle / offline).
- Left panel: agent list with last-seen time.
- Click a dot → mini card (name, location, hours today, **View detail**).
- Filters: team, region, status.
- Auto-refreshes.

2.3 Agents list

- Table: name, team, manager, today's status, punch-in, hours, distance, last location time.
- Click a row → **Agent detail**.

2.4 Agent detail (*the key screen*)

- Header: photo, name, team, manager, today's attendance.
- **Route replay**: map with a time slider — play back the agent's entire day.
- Date picker → replay any past day.
- Tabs: Attendance history · Visits · Flags (fake-GPS / offline events).

2.5 Attendance report

- Grid: rows = agents, columns = dates. Cells show in/out and hours.
- Markers: late, half-day, absent, on leave.
- Filter by date range, team. **Export**.

2.6 Tracking health

- The "what's broken" screen: agents currently offline, GPS disabled, background permission missing, battery-optimisation not disabled, fake-GPS flags.
- Each row → **Notify agent** button (sends a fix-it push).

2.7 Alerts

- Feed of tracking events; mark as read; message the agent.

2.8 Tracking settings

- Tracking interval, geofence radius, auto punch-out time, offline-alert threshold.
- Working-hours rules ("only track between 9am–7pm").

PART 3 — SALES & FIELD FORCE (web)

3A. Field-force management

3.1 Dashboard (home)

- Today: visits planned vs done, orders booked, value, collections, expenses pending approval.
- Team productivity leaderboard.
- Attendance summary.

3.2 Beat plan builder

- Calendar view: assign customers to an agent for each day.
- Drag to reorder stops; auto-suggest the shortest route.

- Copy a beat to next week; bulk-assign.

3.3 Visits

- Table: agent, customer, planned time, actual check-in/out, outcome, duration, GPS-verified ✓/X.
- Filter: planned / done / missed.
- Click → visit detail with report, photos, form answers, next action.

3.4 Leave management

- Pending requests queue → **Approve / Reject** in one click.
- Leave balances per agent; leave rules; leave calendar.

3.5 Expenses (approvals)

- Claims queue: agent, date, type, amount, receipt photo, GPS location, linked visit.
- **Approve / Reject** in one click; bulk approve.
- Expense reports by agent/type/month. **Export**.

3.6 Custom form builder

- Drag-and-drop fields: text, number, dropdown, checkbox, date, photo, signature, GPS.
- Publish a form to selected agents/teams.
- View all submissions in a table; export.

3.7 Targets

- Set targets per agent / region / product / month.
- Live progress bars: achieved vs target.

3.8 Messages / broadcast

- Message one agent or the whole team; see read status.

3B. Back-office sales

3.9 Customers

- List: name, area, phone, outstanding, last order, credit limit.
- Detail: contact, addresses, GST, order history, invoices, statement, map pin.

3.10 Products / catalogue

- List: name, code, HSN, price, tax, stock on hand, reorder level.
- Detail: edit price, tax, stock by warehouse.

3.11 Sales orders

- List: order no., customer, agent, date, value, status (new → confirmed → packed → delivered → invoiced → paid).
- **Field orders land here for approval.**
- Create/edit order: pick customer → add products → live tax + total → stock warning.
- Detail: status timeline + actions (**Create pick list**, **Create delivery note**, **Create invoice**).

3.12 Pick lists

- What the warehouse must pack, from which shelf, assigned picker.
- Mark picked → ready to dispatch.

3.13 Delivery notes / challans

- Create from an order; transporter, vehicle, driver details.
- Print / PDF.

3.14 Invoices

- List + create (from order, or manual).
- Line items, tax breakup, terms. **Send · Print/PDF · Record payment.**

3.15 Payments & collections

- Record receipts against invoices; part-payments allowed.
- **Field collections appear here automatically.**

3.16 Credit notes / returns

- Handle returned goods; adjust against an invoice.

3.17 Reports

- Sales by product / customer / agent / region / period.
- Pending orders, unpaid invoices (ageing), stock movement, visit-to-order conversion.
- **Export** all.

3.18 Sales settings

- Warehouses, tax rates, price lists, discount rules, invoice templates, approval limits.

PART 4 — ACCOUNTS / FINANCE (web)

4.1 Dashboard

- Cash in hand, receivables, payables, this month's profit.
- Alerts: GST return due, overdue invoices.
- Charts: income vs expense, cash flow.

4.2 Chart of accounts

- All ledger accounts and groups. GST-ready default set; add/edit.

4.3 Customers & vendors

- Two lists; each with GSTIN, balance, terms, full ledger and statement.

4.4 Sales invoices (money in)

- List + create; recurring invoices; payment reminders; credit notes.
- **Auto-created from a Sales order when Sales module is on.**

4.5 Bills / purchases (money out)

- Vendor bills, purchase orders, due dates.
- **Auto-created from a goods receipt when Purchase module is on.**

4.6 Payments (received / made)

- Record money in and out; advances; allocation across invoices.

4.7 Banking & reconciliation

- Bank/cash accounts, running balance.
- Import bank statement → match lines to invoices/bills/expenses.
- Auto-categorisation rules.

4.8 GST & tax (*the compliance hub*)

- **E-invoicing** — generate IRN + QR for B2B invoices.
- **E-way bill** — generate from an invoice for goods over ₹50,000.
- **Returns** — GSTR-1, GSTR-3B, GSTR-9 ready data + export.
- **GSTR-2B reconciliation** — match vendor data before claiming input credit.
- **TDS / TCS** — auto-deduct by section, certificates, returns.
- Reverse charge; multiple GSTINs for multi-state.
- **Approval workflow** before filing.

4.9 Expenses

- Record expenses, attach receipts, tag to project/department.

4.10 Inventory & cost

- Stock value, cost of goods sold, stock-adjustment entries.

4.11 Fixed assets (*later phase*)

- Asset register, depreciation, disposal.

4.12 Reports

- P&L, Balance Sheet, Cash Flow, Trial Balance, General Ledger.
- Receivables/payables ageing, party ledgers.
- GST summaries, TDS reports.

- **Custom report builder**; export PDF/Excel/CSV; scheduled emails.

4.13 Journal / manual entries

- Direct journal vouchers with approval; full audit trail.

4.14 Accounts settings

- GST details, TAN, tax rates, HSN/SAC, numbering, approval rules, Tally import.
-

PART 5 — OPS CONSOLE (*Salexa's internal admin* — *not sold to customers*)

5.1 Command center (home)

- Live counters: enquiries, new this week, demo requests, trials, conversion, pipeline value, response time, open tickets.
- Acquisition funnel: visits → enquiries → demos → trials → won.
- Interest by module; industry split; traffic sources; regions; live activity feed.
- Account health: revenue, renewals due, status split.
- **Customisable quick-action bar** — each admin adds their own frequent buttons.

5.2 Leads

- All enquiries with status (New · Contacted · Scheduled · Demo · Trial · Won · Lost).
- One-click status change from the list.
- Detail drawer → **full lifecycle history**: every contact, action and outcome, dated, with who did it.

5.3 Customers

- Paying accounts: company, contact, region, business niche, package, users, revenue, renewal countdown.
- One-click **activate** / **deactivate**.
- Drawer → landing-page details, business details, subscription, and actions (activate, renewal reminder, push notification).

5.4 Support queries

- Tickets with priority, status, SLA stats.

5.5 Requests

- Feature asks, callbacks, pricing enquiries, integrations — with demand counts.

5.6 Notifications

- Push a message: audience → title → message → channels (email / in-app / SMS) → send.
- Automatic reminders: trial-ending, renewal-due, agent-offline (on/off).
- History with reach and open rate.

5.7 Packages & pricing

- Monthly / annual toggle.
- **Per module:** flat base price, free up to N users, per-user charge above N — all live-editable.
- **Bundles:** combine modules into one product; set discount %; see combined price.
- **Composer:** pick modules → one combined price, one account, one invoice.

5.8 Discount master

- Discounts by: single package · combo of packages · specific feature · user volume · overall price.
- Scope, value, condition, on/off toggle.

5.9 Roles & access, audit log, settings

- Admin types (super-admin, growth, support, account manager).
- Every admin action logged.

PART 6 — HOW THE WEB APP TALKS TO THE PHONE

1. The **phone sends** data up: punches, GPS points, visits, orders, payments, expenses, form answers, photos.
 2. The **web app shows** it: live map, visit list, order queue, expense approvals.
 3. The **web app sends** data down: beat plans, targets, tasks, forms, approvals, messages, notifications.
 4. Field data may arrive **late** (the agent was offline). The web app must therefore:
 - show a "**synced at**" time on every field record,
 - never assume "no data = the agent did nothing" — show "**not yet synced**" instead,
 - accept a record that arrives hours after the event, and place it at its **true event time**, not the arrival time.
-

PART 7 — BUILD ORDER (web)

Phase 1 — foundation: Login, roles, company settings, sidebar/module gating, audit log.

Phase 2 — Tracking: dashboard, live map, agents, agent detail + route replay, attendance, tracking health, settings.

Phase 3 — Field force: beat plans, visits, leave, expenses, forms, targets.

Phase 4 — Back-office sales: customers, products, orders, pick lists, delivery notes, invoices, payments, reports.

Phase 5 — Accounts: ledger, invoices, bills, GST hub, banking, reports.

Phase 6 — Ops Console: (internal; can run in parallel).
